COMPANY PROFILE

ABOUT US

SkyEast UK Ltd is the supplier of Baltic peat moss and various growing media for the professional and retail market under its own brand - SkyPeat.

SkyPeat - Premium Quality Peat Moss for Your Growing Business

OUR SERVICES

We are offering customers the highest quality peat moss products combined with exceptional customer service and support, we work directly with you to meet all your needs.

SkyPeat is a high- moor sphagnum type peat, ideal for sowing a variety of seeds as well as plant germination and growing.

OUR PRODUCTS

The main products: Natural white/brown/black peat, pH adjusted peat,
fertilized peat, professional substrates.

Packaging: 20L, 45L, 70L, 250L, 280L, 300L, 3 to 6 CMB big bales.
Fractions: 0-4, 0-7, 0-20, 7-20, 20-40, 0-40, 20-60.

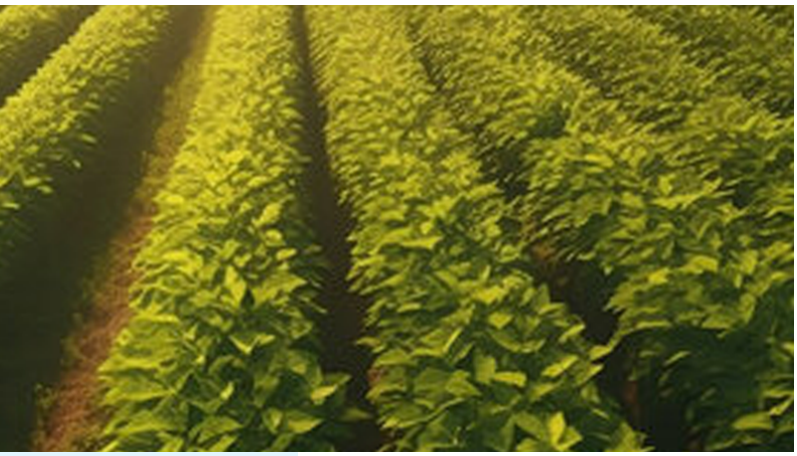
SkyPeat

APPLICATION OF SkyPeat Substrate

The high quality of the SkyPeat substrate allows to create ideal conditions for the growth and development of plants. SkyPeat substrate is made from high quality peat. SkyPeat is used for growing seedlings of various crops.

The peat substrate regulates the growth and development of plants at the initial stages, prevents and eliminates nutrient deficiencies, and affects the growth processes of the aerial and root parts of the plant.

Vegetable Crops



Flower Crops

Seeding

Mushroom Growers

Our portfolio serves the widest range of areas in the “green sector”; from hobby gardeners through to professional horticulturalists. Just natural peat moss or even special substrates or planter pots. With our name and our mission statement ‘’Your plants in good hands’’, we stand for innovative spirit, top products, customer orientation and gapless logistics.

Properties of the peat substrate – SkyPeat

All SkyPeat substrates are treated with a water-retaining agent that increases the hygroscopicity of the peat and improves water absorption. SkyPeat substrates do not require the addition of lime and are free of weed seeds and pathogens. Due to the high compaction factor of SkyPeat when packed, the bale is compact and contains the maximum volume of the substrate itself.

SkyPeat PRODUCTS

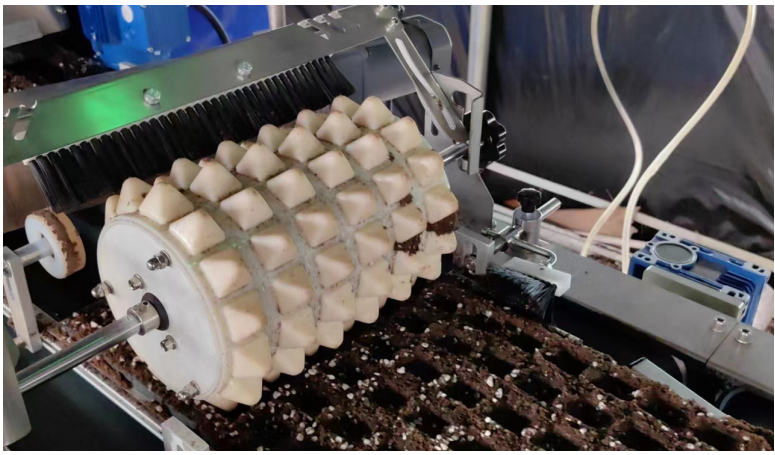
SkyPeat PRODUCTS

SkyPeat - professional peat moss substrate

Professional Substrate SkyPeat - it is a ready-to-use peat substrate based on high-quality peat, has high air and moisture capacity, low ash content and low content of water-soluble salts. For private and industrial use.

The production of SkyPeat Substrate maintains a consistently high product quality to ensure healthy, consistent crop development. Each product has a fully tested and proven formulation and has proven itself in many applications.

At a customer’s request, we can add different NPK fertilizers, clay, perlite, coconut, tree bark, other additives and microelements, in the ratio preferred by the customer. We guarantee product availability throughout the year and provide products in various types of packaging and different fractions thereby meeting each customer's requirements production of SkyPeat Substrate maintains a consistently high product quality to ensure healthy, consistent crop development. Each product has a fully tested and proven formulation and has proven itself in many applications.



SkyPeat SEEDING

A natural high-moor peat substrate of small and medium-size fractions with a fertiliser amount of 0.5 to 1.0 g / l, balanced pH level ranging from 5.5 to 6.5 and improved water absorption. It is intended for seed germination, vegetative propagation and growing of salt-sensitive plants.
